

MEASUREMENT FORM

REV C 08/30/13

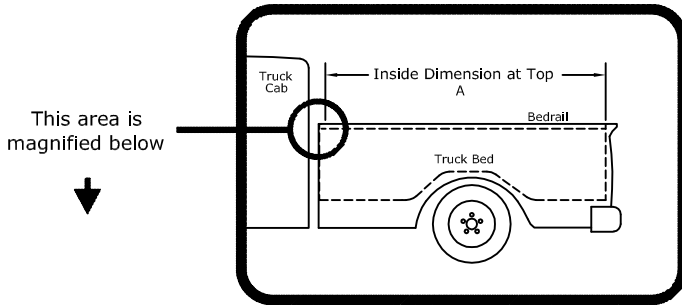

BEDFIN

SIGNAGE WITHOUT SACRIFICE

Bedfin will fit most full size pickup trucks. To verify compatibility fill out this form with your specific dimensions, and submit to Bedfin. A variant of the standard hardware or custom hardware may be required for your particular vehicle.

STEP 1 Measure inside dimension of truck bed up at the top. Bedfin rests on the bedrail and extends into the bed, so the dimension provided must be accurate. Improper measuring may result in poor fit and tailgate may not shut.

Headrail information	
A	Inside bed length
Outward or Inward Return?	
B	Bed inside to cab distance
C	Headrail profile height
D	Headrail profile depth
E	Bed outside to cab distance

STEP 2 The adjustable headrail clamp requires clearance between pickup bed and cab. The two most common designs are illustrated below. Please specify which style is most like your vehicle and list the dimensions in the area above.

STEP 3 Provide vehicle make and model information and your contact information. By sending vehicle model information, it helps Bedfin build a more comprehensive library of model info for future inquiries about compatibility.

Scan and submit your form via email to keith@bedfin.com
